

Managed Backups

Powered by Acronis

Rapid's managed backup (powered by Acronis) provides organizations with a comprehensive and secure way to protect their critical data, applications, and systems by backing them up to the cloud. Using managed backups, businesses can perform full-image, file-level, and application-level backups, and recover data quickly in the event of a disaster or data loss.

Multi-hypervisor Support

Supports a wide range of platforms, including XEN, VMware and Cobolt

Storage on Acronis Cloud

Secure and scalable cloud-based storage on Acronis Cloud

Backup and Scheduling

Enables users to customize backup schedules based on their requirements,

Scalability and Flexibility

Facilitates seamless addition of backup resources to meet business requirements

Backup Options

File/Image Level Backup

Virtual Machine Backup

File-level backup protects individual files and folders, while virtual machine backup captures an entire virtual machine including its OS, applications, and data.

Backup Types

Incremental Backup

Full Backup

Incremental backup only backs up changes made since the last backup, while full backup backs up all data every time.

Secure and Compliant Data Centers

Acronis has a comprehensive approach to data center and security compliance to ensure the protection and privacy of customer data.

Charging Mechanism

Agent based approach will be followed, the client application will be installed on the virtual machine. Hence, the charges will be dependent on two variables:

Fixed Cost per Virtual Machine

Fixed Cost per GB of Storage
